Value Cost Chain Notes

Purpose: The notes section is to be utilized to expand on the Value Cost Chain diagram and connect to documentation gathered through the project team and its affected subject matter experts. The notes section is free form and can contain such aspects as data timing, system and business process description details, and other supporting details.

Notes:

Glossary

BDM – Business Development Manager. Intel job function

CMR – Corporate Market Research. Intel organization that performs structured market research

CSG – Customer Solutions Group. Formerly called SMDG (Solutions Market Development Group)

EU – End-user

ISV – Independent Software Vendor. A company that makes and sells software products that run on one or more computer hardware or operating system platforms

MDM – Marketing Development Manager

MRC – Management Review Committee. A group of close-to-ESM (Executive Staff Member) managers assembled to be informed of the direction and progress of a major project

MSA – Market Segment Analysis. Balanced short- and long-term view to understand market trends, usage trends, and unmet needs over a multi-year horizon. Developed on an annual cadence as an input to the PSD document

PAPR – People and Practices Research. Intel organization that researches ethnography

PPOPL1 – Platform Product Opportunity Plan, Level 1. Identifies market requirements and the decision timeline

PSD – Platform Strategy Document. Platform strategy response to identified MSA opportunities. Developed on an annual cadence with a five-year planning horizon. Results in multi-generational vision and platform requirements. Encompasses market trends, capabilities, customer inputs, fellow traveler strategies, and business value propositions

SRM – Strategic Relationship Manager

TOA – Technical Opportunity Assessment. Document developed in conjunction with MSA which feeds technology trends into the Platform Product Lifecycle planning process (PPLC). Developed on an annual cadence with a 3-7 year time horizon

UCD – User Centered Design. Intel organization that performs design research

UTA – Usage Trend Assessment. Proposed document to be developed on an annual cadence to feed into either the MSA or directly into the PSD to address usage trends – what unmet customer needs exist, how might usage evolve over time based on evolution of capabilities, etc. The MSA currently focuses on market trends but has not traditionally covered usage

Revision History

<u>Rev. #</u>	<u>Date</u>	<u>Author</u>	<u>Reason for Change</u>
0.1	25May05	M. Liu	Document creation
0.5	31Aug05	M. Liu	Multiple changes for final approval of 0.5 version: Foot verbiage to process doc, multiple outputs after RD3, more detail on Demonstrate; Added TOA/MSA/UTA/PSD/PFVG; Updated market intelligence information; updates re: planning/tech process interaction; Added consumer research; Up-front capture revisions per Anne Bartlett; Added gates to front/end of each for continuity; Added glossary; Incorporated feedback from multiple review meetings; incorporated capture revisions per Mary Doyle feedback

Document Approvers

<u>Name</u>	<u>Project Role</u>	<u>Approval Date</u>
EU Team	Document Owner, Project Manager	08/31/05

Project Roles:

Approver: The Approver ensures the document is acceptable in terms of both technical correctness and administrative accuracy.

Change Author: Person responsible for electronically editing a document, and initiating it through the approval process.

Document Owner: Person/Group responsible for the technical content of documents including the creation, revision, and obsolescence process of the document. The Owner is also a document Approver.

Project Manager: The person responsible for reviewing and approving changes before they are implemented into the Data Quality Solutions programs.

Reviewer: A person who reviews the proposed controlled document for technical content, pertinence as a controlled document. An e-signature ("I approve..." e-mail) signature indicates a recommendation to release that document for publication.
